

# LVD TEST REPORT

**Report No.:** SET2016-11010

**Product:** Solar Inverter

**Model No. :** EA33KTLISI

**Brand Name:** /

**Applicant:** EAST GROUP CO.,LTD.

**Issued by:** CCIC Southern Electronic Product Testing(Shenzhen) Co.,Ltd

**Lab Location:** Electronic Testing Building, Shahe Road, Xili, Nanshan District, Shenzhen, 518055, P. R. China

**Tel:** 86 755 26627338    **Fax:** 86 755 26627238

This test report consists of **72** pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product endorsement by CCIC-SET. The test results in the report only apply to the tested sample. The test report shall be invalid without all the signatures of testing engineers, reviewer and approver. Any objections must be raised to CCIC-SET within 15 days since the date when the report is received. It will not be taken into consideration beyond this limit

## Test Report

**Product** ..... : Solar Inverter

**Model No.** ..... : EA33KTLSI

**Brand Name** ..... : /

**Applicant** ..... : EAST GROUP CO.,LTD.

**Applicant Address** ..... : NO.6 NORTHERN INDUSTRY ROAD, SONGSHAN LAKE SCI&TECH INDUSTRY PARK, DONGGUAN, P.R.CHINA

**Manufacturer** ..... : EAST GROUP CO.,LTD.

**Manufacturer Address** ..... : NO.6 NORTHERN INDUSTRY ROAD, SONGSHAN LAKE SCI&TECH INDUSTRY PARK, DONGGUAN, P.R.CHINA

**Rating** ..... : EA33KTLSI: DC Input : MPPT: DC320-900V,Max. DC current :3\*23A; AC Output: 3/PE AC 3\*400V,50/60Hz,3\*48A, Rated power 30kW,Max. power 33kW

**Test Standards** ..... : EN 62109-1:2010 Safety of power converters for use in photovoltaic power systems-Part1:General requirements.  
EN 62109-2 :2011 Safety of power converters for use in photovoltaic power systems-Part2:Particular requirements for inverters

**Test Result** ..... : PASS

**Tested by** ..... : Zhou Jun  
 2016.06.27  
\_\_\_\_\_  
Signature, Date

**Reviewed by** ..... : Xie Yuzhang  
 2016.06.27  
\_\_\_\_\_  
Signature, Date

**Approved by** ..... : Wu Lian  
 2016.06.27  
\_\_\_\_\_  
Signature, Date

**Testing**

Date of receipt of test item.....: 2016-04-22

Date(s) of performance of test .....: 2016-04-22 to 2016-06-27

Factory.....: EAST GROUP CO.,LTD.

Address.....: NO.6 NORTHERN INDUSTRY ROAD, SONGSHAN LAKE  
SCI&TECH INDUSTRY PARK, DONGGUAN, P.R.CHINA

**Test case verdicts**

Test case does not apply to the test object .....: N/A

Test item does meet the requirement .....: P(ass)

Test item does not meet the requirement .....: F(ail)

.....:

**General remarks:**

This test report shall not be reproduced except in full without the written approval of the testing laboratory.

The test results presented in this report relate only to the item tested.

"(see remark #)" refers to a remark appended to the report.

"(see appended table)" refers to a table appended to the report.

Throughout this report, a coma is used as the decimal separator.

**Attached with:**

/

**General descriptions:**

Models EA33KTLSI is a Solar Inverter which converts three MPPT channel direct current generated from the PV array to alternating current.

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
1	GENERAL		P

4	General testing requirements		P
4.1	General		P
4.2	General conditions for testing		P
4.2.1	Sequence of tests		P
4.2.2	Reference test conditions		P
4.2.2.1	Environmental conditions		P
	Unless otherwise specified in this standard, for example with regard to environmental category as defined in 6.1, the following ambient environmental conditions shall exist in the test location:  a)temperature of 15 °C to 40 °C; b)a relative humidity of not more than 75 % and not less than 5 %; c)an air pressure of 75 kPa to 106 kPa; d)no frost, dew, percolating water, rain, solar radiation, etc.		P
4.2.2.2	State of equipment		P
4.2.2.3	Position of equipment		P
4.2.2.4	Accessories		P
4.2.2.5	Covers and removable parts	Need to use a tool to remove covers	P
4.2.2.6	Mains supply		P
	a)Voltage:	See rating plate	P
	b) Frequency:	See rating plate	P
	c) Polarity:	Not pluggable equipment type A.	N/A
	d)Earthing:		P
	e)Over-current Protection		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
4.2.2.7	Supply ports other than the mains		P

4.2.2.7.1	Photovoltaic supply sources		P
4.2.2.7.2	Battery inputs	Without battery.	N/A
4.2.2.8	Conditions of loading for output ports		P
	- for continuous operation ratings		P
	- for intermittent operation ratings		N/A
	- for short-term operation ratings		N/A
4.2.2.9	Earthing terminals	Protective conductor terminal connected to earth.	P
4.2.2.10	Controls		P
	a) mains selection devices shall be set to the correct value unless otherwise noted in this standard.	No such selection devices.	N/A
	b) combinations of settings shall not be made if they are prohibited by the manufacturer's instructions provided with the equipment.		P
4.2.2.11	Available short circuit current	More than 1000A	P
4.3	Thermal Testing		P
4.3.1	General		P
	This subclause specifies requirements intended to prevent hazards due to:		P
	- touchable parts exceeding safe temperatures; and		P
	- components, parts, insulation and plastic materials exceeding temperatures which may degrade safety-related electrical, mechanical, or other properties during normal use over the expected life of the equipment;		P
	- structures and mounting surfaces exceeding temperatures which may degrade the materials over the expected life of the equipment		P
4.3.2	Maximum temperatures	(see appended table 4.3)	P
4.3.2.1	General		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
4.3.2.2	Touch temperatures		P
4.3.2.3	Temperature limits for mounting surfaces		P
4.4	Testing in Three fault condition	(see appended table 4.4)	P
4.4.1	General		P
4.4.2	Test conditions and duration for testing under fault conditions		P
4.4.2.1	General		P
4.4.2.2	Duration of tests		P
4.4.3	Pass/fail criteria for testing under fault conditions		P
4.4.3.1	Protection against shock hazard		P
	Compliance with requirements for protection against electric shock is checked during and after the application of Three faults as follows:	No shock hazards.	P
	a) by making measurements to check that no accessible DVC-A circuits have become shock-hazardous using the steady state limits for DVC-A in Table 6 and the short-term limits of 7.3.2.3, and that such circuits remain separated from live parts at voltages greater than DVC A with at least basic insulation. Compliance is checked by the test of 7.5.2 (without humidity preconditioning) for basic insulation		P
	b) by performing a dielectric strength test as per 7.5.2 (without humidity preconditioning) in the following cases: i) on reinforced or double Insulation, using the test level for basic insulation, and ii) on basic insulation in protective class I equipment, using the test level for basic insulation, unless it can be determined that the fault did not result in any damage to the protective earthing conductor or terminal, or to protective bonding means		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	c) by inspection to ensure a fuse connected between the protective earthing terminal and the protective earthing conductor in the test setup has not opened; the fuse shall be rated 3 A non-time-delay (for equipment rated for use on circuits protected by overcurrent protection rated 30 A or less) or 30 A to 35 A non-time-delay (for equipment rated for use on circuits protected by overcurrent protection rated more than 30 A); the enclosure is not to be contacting earth in any other location during the testing		P
	d) by inspection of the enclosure to ensure that no damage has resulted that allows access to parts that are hazardous live.		P
4.4.3.2	Protection against the spread of fire	No fire hazards	P
4.4.3.3	Protection against other hazards	No other hazards after application of the faults	P
4.4.3.4	Protection against parts expulsion hazards	No such hazards after application of the faults	P
4.4.4	Three fault condition to be applied:		P
4.4.4.1	Component fault tests		P
4.4.4.2	Equipment or parts for short-term or intermittent operation	(see appended table 4.4)	P
4.4.4.3	Motors	(see appended table 4.4)	P
4.4.4.4	Transformer short circuit tests	(see appended table 4.4)	P
4.4.4.5	Output short circuit	(see appended table 4.4)	P
4.4.4.6	Backfeed current test for equipment with more than one source of supply	Only one source of supply can be connected due to construction of PV inverter	P
4.4.4.7	Output overload		P
4.4.4.8	Cooling system failure		p
	a) air-intakes blocked or partially blocked		N/A
	b) cooling fans stopped or disconnected, one at a time		p

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	c) circulation of water or other coolant shall be stopped or partially restricted		N/A
4.4.4.9	Heating devices	Without heating devices.	N/A
	a) timers which limit the heating period shall be overridden to energize the heating circuit continuously		N/A
	b) temperature control devices or circuits shall have Three fault conditions applied such that control over the heater is lost. Over-temperature protection devices meeting the requirements of 14.3 are left operational during the test		N/A
4.4.4.10	Safety interlock systems		N/A
4.4.4.11	Reverse d.c. connections	(see appended table 4.4)	P
4.4.4.12	Voltage selector mismatch	No such device	N/A
4.4.4.13	Mis-wiring with incorrect phase sequence or polarity	(see appended table 4.4)	P
4.4.4.14	PWB short-circuit test	(see appended table 4.4)	P
4.5	Humidity preconditioning		P
4.5.1	General		P
4.5.2	Conditions	Before applying humidity, the equipment is brought to a temperature of $42^{\circ}\text{C} \pm 2^{\circ}\text{C}$ , normally by keeping it at this temperature for at least 4 h before the humidity preconditioning. Then worst case per manufacturer's manual: 93%; 40°C, 2 days	P
4.6	Voltage Backfeed Protection	Can not touch output terminal without tools , warning label is added.	N/A
4.6.1	Backfeed tests under normal conditions		N/A
4.6.2	Backfeed tests under Three-fault conditions		N/A
4.6.3	Compliance with backfeed tests		N/A

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	- 15 s for sources that are permanently connected		N/A
	- 1 s for sources that are cord-connected or use connectors that can be opened without the use of a tool		N/A
4.7	Electrical Ratings Tests	(see appended table 4.7.1)	P
4.7.1	Input Ratings		P
4.7.1.1	Measurement requirements for DC input ports		P
4.7.1.2	Measurement requirements for DC input ports		P
4.7.2	Output Ratings		P

5	Marking and documentation		P
5.1	Marking		P
5.1.1	General		P
5.1.2	Durability	The markings are rubbed quickly by hand, without undue pressure, for 30 s with a cloth soaked with the specified cleaning agent (or, if not specified, with isopropyl alcohol). The markings shall be clearly legible after the above treatment, and adhesive labels shall not have worked loose or become curled at the edges	P
5.1.3	Identification mark		P
	a) the name or trade mark of the manufacturer or supplier	See copy of marking plate provided in this report	P
	b) a model number, name or other means to identify the equipment	See copy of marking plate provided in this report	P
	c) a serial number, code or other marking allowing identification of manufacturing location and the manufacturing batch or date within a three month time period.	See copy of marking plate provided in this report	P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
5.1.4	Power rating	See copy of marking plate provided in this report	P
	- input voltage, type of voltage (a.c. or d.c.), frequency, and maximum continuous current for each input .....	See copy of marking plate provided in this report	P
	- output voltage, type of voltage (a.c. or d.c.), frequency, maximum continuous current, and for a.c. outputs, either the power or power factor for each output .....	See copy of marking plate provided in this report	P
	- the ingress protection (IP) rating as in 6.3 below	See copy of marking plate provided in this report	P
5.1.5	Fuse identification (marking, special fusing characteristics, cross-reference) .....		P
5.1.6	Terminals, connections and controls	DC input, grid connection	P
5.1.6.1	Protective conductor terminals	the colour coding green-yellow and symbol 7 of Annex C	P
5.1.7	Swtiches and circuit-breakers		P
5.1.8	Class II symbol if applicable	No such devices	N/A
5.1.9	Terminal boxes for External Connections		P
	a) the minimum temperature rating and size of the cable to be connected to the terminals		N/A
	b) a marking to warn the installer to consult the installation instructions. Symbol 9 of Annex C is an acceptable marking.	Add warning	P

5.2	Warning markings		P
5.2.1	Visibility and legibility requirements for warning markings		P
5.2.2	Content for warning markings		P
5.2.2.1	Ungrounded heatsinks and similar parts	Without grounded heatsinks.	N/A
5.2.2.2	Hot Surfaces		P
5.2.2.3	Coolant		N/A

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
5.2.2.4	Stored energy	Symbol 21 of Annex C used for warning.	P
5.2.2.5	Motor guarding	No motor	N/A
5.2.3	Sonic hazard markings and instructions	No sonic hazard.	N/A
5.2.4	Equipment with multiple sources of supply	No multiple sources supply	N/A
5.2.5	Excessive touch current	Measured: 1.52mA < limit 3.5mA.	N/A

5.3	Documentation	P
5.3.1	General	P
	a) Explanations of markings and symbols	P
	b) Location and function of terminals and controls	P
	c) Ratings or specifications	P
	d) Warning for supplying voltage	P
5.3.1.1	Language	English version was checked. At least the safety relevant information will be given in other applicable languages to be confirmed during the respective national approval.
5.3.1.2	Format	P
5.3.2	Information related to installation	P
	a) assembly, location, and mounting requirements	P
	b) ratings and means of connection to each source of supply and any requirements related to wiring and external controls, colour coding of leads, disconnection means, or overcurrent protection needed, including instructions that the installation position shall not prevent access to the disconnection means	P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	c) ratings and means of connection of any outputs from the PCE, and any requirements related to wiring and external controls, colour coding of leads, or overcurrent protection needed		P
	d) explanation of the pin-out of connectors for external connections, unless the connector is used for a standard purpose (e.g. RS 232)		P
	e) ventilation requirements		P
	f) requirements for special services, for example cooling liquid		N/A
	g) instructions and information relating to sound pressure level if required by 10.2.1		N/A
	h) where required by 14.8.1.3, instructions for the adequate ventilation of the room or location in which PCE containing vented or valve-regulated batteries is located, to prevent the accumulation of hazardous gases		N/A
	i) tightening torque to be applied to wiring terminals		P
	j) values of backfeed short-circuit currents available from the PCE on input and output conductors under fault conditions, if those currents exceed the max. rated current of the circuit, as per 4.4.4.6		N/A
	k) for each input to the PCE, the maximum value of short-circuit current available from the source, for which the PCE is designed		P
	l) compatibility with RCD and RCM		P
	m) instructions for protective earthing of the PCE, including the information required by 7.3.6.3.7 if a second protective earthing conductor is to be installed		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	n) where required by 7.3.8, the installation instructions shall include the following or equivalent wording: "This product can cause current with a d.c. component. Where a residual current-operated protective (RCD) or monitoring (RCM) device is used for protection in case of direct or indirect contact, only an RCD or RCM of Type B is allowed on the supply side of this product."		N/A
	o) for PCE intended to charge batteries, the battery nominal voltage rating, size, and type		P
	p) PV array configuration information, such as ratings, whether the array is to be grounded or floating, any external protection devices needed, etc.		P
5.3.3	Information related to operation		P
	– instructions for adjustment of controls including the effects of adjustment;		P
	– instructions for interconnection to accessories and other equipment, including indication of suitable accessories, detachable parts and any special materials		N/A
	– warnings regarding the risk of burns from surfaces permitted to exceed the temperature limits of 4.3.2 and required operator actions to reduce the risk		N/A
	– instructions that if the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.		N/A
5.3.4	Information related to maintenance		P
	– intervals and instructions for any preventive maintenance that is required to maintain safety (for example air filter replacement or periodic re-tightening of terminals);	Limited to trained and authorized professional personnel from manufacturer or its authorized representative	P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	– instructions for accessing operator access areas, if any are present, including a warning not to enter other areas of the equipment;		N/A
	– part numbers and instructions for obtaining any required operator replaceable parts;		N/A
	– instructions for safe cleaning (if recommended);		P
	– where there is more than one source of supply energizing the PCE, information shall be provided in the manual to indicate which disconnect device or devices are required to be operated in order to completely isolate the equipment.		N/A
5.3.4.1	Battery maintenance	Without battery used	N/A
	– Servicing of batteries should be performed or supervised by personnel knowledgeable about batteries and the required precautions		N/A
	– When replacing batteries, replace with the same type and number of batteries or battery packs		N/A
	– General instructions regarding removal and installation of batteries.		N/A
	– CAUTION: Do not dispose of batteries in a fire. The batteries may explode.		N/A
	– CAUTION: Do not open or damage batteries. Released electrolyte is harmful to the skin and eyes. It may be toxic		N/A
	– CAUTION: A battery can present a risk of electrical shock and high short-circuit current. The following precautions should be observed when working on batteries:		N/A
	a) Remove watches, rings, or other metal objects.		N/A
	b) Use tools with insulated handles.		N/A
	c) Wear rubber gloves and boots.		N/A
	d) Do not lay tools or metal parts on top of batteries.		N/A

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	e) Disconnect charging source prior to connecting or disconnecting battery terminals.		N/A
	e) Disconnect charging source prior to connecting or disconnecting battery terminals.		N/A
	f) Determine if battery is inadvertently grounded. If inadvertently grounded, remove source from ground. Contact with any part of a grounded battery can result in electrical shock. The likelihood of such shock can be reduced if such grounds are removed during installation and maintenance (applicable to equipment and remote battery supplies not having a grounded supply circuit).		N/A

6	Environmental requirements and conditions	P
6.1	Environmental categories and minimum environmental conditions	P
6.1.1	OUTDOOR	P
6.1.2	INDOOR, unconditioned	N/A
6.1.3	INDOOR, conditioned	N/A
6.2	Pollution degree	PDIII –Outside PD II – Inside (due to IP65 )
6.3	Ingress Protection	IP65
6.4	UV exposure	N/A
6.5	Temperature and humidity	Ambient temperature Operation: -25 °C to +60 °C Operation: ≤95 %, no condensation.

7	Protection against electric shock and energy hazards	P
7.1	General	P
7.2	Fault conditions	P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
7.3	Protection against electric shock		P
7.3.1	General		P
7.3.2	Decisive voltage classification		P
7.3.2.1	Use of <i>decisive voltage class (DVC)</i>		P
7.3.2.2	Limits of DVC	Accessible circuit: DVC A Power circuit: DVC C,sampling circuit:DVC B	P
7.3.2.3	Short-term limits of accessible voltages under fault conditions		P
7.3.2.4	Requirements for protection		P
7.3.2.5	Connection to PELV and SELV circuits		P
7.3.2.6	Working voltage and DVC		P
7.3.2.6.1	General		P
7.3.2.6.2	AC working voltage		P
7.3.2.6.3	DC working voltage		P
7.3.2.6.4	Pulsating working voltage		N/A
7.3.3	Protective separation		P
	• double or reinforced insulation,		P
	• protective screening, i.e. by a conductive screen connected to earth by protective bonding in the PCE, or connected to the protective earth conductor itself, whereby the screen is separated from live parts by at least basic insulation		P
	• protective impedance comprising limitation of current per 7.3.5.3.1 and of discharged energy per 7.3.5.3.2		N/A
	• limitation of voltage according to 7.3.5.4		N/A
7.3.4	Protection against direct contact		P
7.3.4.1	General		P
7.3.4.2	Protection by means of enclosures and barriers		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
7.3.4.2.1	General	User could not open the door without a tool.	P
7.3.4.2.2	Access probe criteria		P
	a) decisive voltage classification A, (DVC A) - the probe may touch the live parts;		P
	b) decisive voltage classification B, (DVC B) - the probe shall have adequate clearance to live parts, based on the clearance for functional insulation;		N/A
	c) decisive voltage classification C, (DVC C) - the probe shall have adequate clearance to live parts, based on the clearance for basic insulation.		P
7.3.4.2.3	Access probe tests		P
	Test by inspection .....	Compliance	P
	Test with test finger&pin (Figure D.1& D.2) .....	No hazards.	P
	Test with jointed test finger (Figure D.1) .....	No hazards.	P
	Test with IP3X test probe .....	No TNV circuit	N/A
7.3.4.2.4	Service access areas	The manufacturer's manual with the following substance: Always disconnect the unit from the MAINS and PV supply by the external customer installed disconnecting devices before installation, servicing and maintenance works	P
7.3.4.3	Protection by means of insulation of live parts		P
7.3.5	Protection in case of direct contact		P
7.3.5.1	General		P
7.3.5.2	Protection using decisive voltage class A		P
7.3.5.3	Protection by means of protective impedance		N/A
7.3.5.3.1	Limitation of current through protective impedance		N/A
7.3.5.3.2	Limitation of discharging energy through protective impedance		N/A

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
7.3.5.4	Protection by means of limited voltages		N/A
7.3.6	Protection against indirect contact		P
7.3.6.1	General		P
7.3.6.2	Insulation between live parts and accessible conductive parts		P
7.3.6.3	Protective class I - Protective bonding		P
7.3.6.3.1	General		P
	a) accessible conductive parts that are protected by one of the measures in 7.3.5.2 to 7.3.5.4		P
	b) accessible conductive parts that are separated from live parts of DVC-B or -C using double or reinforced insulation.		P
7.3.6.3.2	Rating of protective bonding		P
	a) through direct metallic contact;		N/A
	b) through other conductive parts which are not removed when the PCE or sub-units are used as intended		N/A
	c) through dedicated protective bonding conductors;		P
	d) through other metallic components of the PCE.		N/A
7.3.6.3.3	Rating of protective bonding		P
7.3.6.3.3.1	Test current, duration, and acceptance criteria	Testcurrent:60A, duration:4min; limit:2.5V	P
7.3.6.3.4	Protective bonding impedance (routine test)	0.19V	P
7.3.6.3.5	External protective earthing conductor		P
7.3.6.3.6	Means of connection for the external protective earthing conductor		P
7.3.6.3.6.1	General	Symbol 7 of annex C and the colour coding green-yellow	P
7.3.6.3.7	Touch current in case of failure of the protective earthing conductor	<1.08mA	P
7.3.6.4	Protective class II - Double or reinforced insulation		N/A

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
7.3.7	Insulation Including Clearance and Creepage Distances		P
7.3.7.1	General		P
7.3.7.1.1	Pollution degrees	III	P
7.3.7.1.2	Overvoltage category and Impulse withstand voltage rating category:	OVCIII for AC, and OVC II for DC	P
7.3.7.1.3	Supply earthing systems	IT system	P
7.3.7.1.4	Insulation voltages	AC: 4000V DC:4470V	P
7.3.7.2	Insulation between a circuit and its surroundings		P
7.3.7.2.1	General		P
7.3.7.2.2	Circuits connected directly to the MAINS		P
7.3.7.2.3	Circuits other than MAINS circuits		P
7.3.7.2.4	Insulation between circuits		P
7.3.7.3	Functional insulation		P
7.3.7.4	Clearance distances	(see append table 7.3.7)	P
7.3.7.4.1	Determination		P
7.3.7.4.2	Electric field homogeneity		N/A
7.3.7.4.3	Clearance to conductive enclosures		P
7.3.7.5	Creepage distances	(see append table 7.3.7)	P
7.3.7.5.1	General		P
7.3.7.5.2	Voltage		P
7.3.7.5.3	Materials	Insulating material group IIIb: 175 CTI $\geq$ 100, compliance checked for material certificate and specifications.	P
7.3.7.6	Coating		N/A
7.3.7.7	PWB spacings for functional insulation	UL approved PCB used	P
7.3.7.8	Solid insulation		P
7.3.7.8.1	General		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
7.3.7.8.2	Requirements for electrical withstand capability of solid insulation		P
7.3.7.8.2.1	Basic, supplemental, reinforced, and double insulation		P
7.3.7.8.2.2	Functional insulation		P
7.3.7.8.3	Thin sheet or tape material		P

8.5	Wall mounting		N/A
8.6	Expelled parts		N/A

9	Protection against fire hazards		P
9.1	Resistance to fire		P
9.1.1	Reducing the risk of ignition and spread of flame	Use of materials with the required flammability classes.	P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	Method 1, selection and application of components wiring and materials	(see appended table 4.7)	P
	Method 2, application of all of simulated fault condition tests		N/A
9.1.2	Conditions for a fire enclosure	See below	P
9.1.2.1	Parts requiring a fire enclosure		P
	– components in mains circuits;		P
	– components in secondary circuits supplied by power sources which exceed the limits for a limited power source as specified in 9.2;		P
	– components in secondary circuits supplied by a limited power source as specified in 9.2, but not mounted on material of flammability class V-1;		N/A
	– components within a power supply unit or assembly having a limited power output complying with the criteria for a limited power source as specified in 9.2, including overcurrent protective devices, limiting impedances, regulating networks and wiring, up to the point where the limited power source output criteria are met;		N/A
	– components having unenclosed arcing parts, such as open switch and relay contacts and commutators, in a circuit at hazardous voltage or at a hazardous energy level;		P
	– insulated wiring, except as permitted in 9.1.2.2.		P
9.1.2.2	Parts not requiring a fire enclosure		P
	– wiring and cables insulated with PVC, TFE, PTFE, FEP, neoprene or polyimide;		P
	– plugs and connectors forming part of a power supply cord or interconnecting cable;		N/A
	– components, including connectors, meeting the requirements of 9.1.3.2, which fill an opening in a fire enclosure;		P

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	– connectors in secondary circuits supplied by power sources which are limited to a maximum of 15 VA under normal operating conditions and after a Three fault in the equipment;		N/A
	– connectors in secondary circuits supplied by a limited power source as specified in 9.2,		N/A
	– other components in secondary circuits:		N/A
9.1.3	Materials requirements for protection against fire hazard		P
9.1.3.1	General	PCB is with flammability category V-0	P
9.1.3.2	Materials for fire enclosures	Metal enclosure used.	P
9.1.3.3	Materials for components and other parts inside fire enclosures	Plastic parts outside metal enclosure rated at HF-1	P
9.1.3.4	Materials for air filter assemblies	Internal components except small parts are V-2 or better.	P
9.1.4	Openings in fire enclosures		N/A
9.1.4.1	General		N/A
9.1.4.2	Side openings treated as bottom openings		N/A
9.1.4.3	Openings in the bottom of a fire enclosure		N/A
	Construction of the bottom, dimensions (mm) .....		N/A
9.1.4.4	Equipment for use in a closed electrical operating area		N/A
9.1.4.5	Doors or covers in fire enclosures		N/A
9.1.4.6	Additional requirements for openings in transportable equipment	Not transportable equipment.	N/A
	dimensions (mm) .....		N/A
9.2	Limited power sources		N/A
	a) Inherently limited output		N/A
	b) Impedance limited output		N/A
	c) Overcurrent protective device limited output		N/A

EN 62109-1 : 2010			
Clause	Requirement – Test	Result - Remark	Verdict
	d) Regulating network limits the output		N/A
	Max. output voltage (V), max. output current (A), max. apparent power (VA) .....		—

Remark: 1)\*denote the temperature limit can reach to 100 degree C with hot surface marking.

4.4	TABLE: Fault condition tests						P
	Ambient temperature (°C) :				24.5°C		—
	Power source for EUT: Manufacturer, model/type, output rating :				--		—
Component No.	Fault	Supply voltage (V)	Test time	Fuse #	Fuse current (A)	Observation	
Output	Short circuit	DC800	10 min	/	/	Unit shut down immediately ,No output, no hazard, no damaged.	
Output	Overload	DC800	10min	/	/	Unit operated with rating under MPPT mode, No damage, no hazard.	
Heatsink	Block	DC800	60min	/	/	Unit derating, No damaged, no hazard.	

EN 62109-1 : 2010						
Clause	Requirement – Test			Result - Remark		Verdict
PV + and -	Reverse phase	DC800	10min	/	/	PCE can't start. No output ,no damage,no hazard.
Output	Missing phase	DC800	10min	/	/	Unit operated normally.
Safety interlock system	Disable	DC800	10min	/	/	Need tools to open the EUT
R284	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
MOSFET Q69 Gate to Source	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C106	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset
C128	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset
C142	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset
J19 Pin23 to Pin24	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
R1	Short circuit	DC800	10min	/	/	LCD display fault condition, No output,no damaged,no hazard.
D62	Short circuit	DC800	10min	/	/	Diode D63、D68 damaged. Unit work as normal. No emission of molten metal, or burning insulation, or flaming or glowing particles. Can withstand electric strength test. No hazard.

EN 62109-1 : 2010						
Clause	Requirement – Test			Result - Remark		Verdict
MOSFET Q78 Gate to Source	Short circuit	DC800	10min	/	/	Unit work as normal, no hazards.
C173	Short circuit	DC800	10min	/	/	Unit work as normal, no hazards.
R354	Short circuit	DC800	10min	/	/	Unit work as normal, no hazards.
R354	Open circuit	DC800	10min	/	/	Unit work as normal, no hazards.
C8	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C186	Short circuit	DC800	10min	/	/	Unit shut down, disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
R250	Short circuit	DC800	10min	/	/	Unit work as normal, no hazards.
C38	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C35	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C41	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C46	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C65	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.

EN 62109-1 : 2010						
Clause	Requirement – Test			Result - Remark		Verdict
C19 (INV board)	Short circuit	DC800	10min	/	/	A、B、C phase IGBT modules are all damaged. Unit shut down, disconnected AC mains. No emission of molten metal, or burning insulation, or flaming or glowing particles. Can withstand electric strength test. No hazard.
R81 (INV board)	Short circuit	DC800	10min	/	/	Unit work as normal, no hazards.
R82 (INV board)	Open circuit	DC800	10min	/	/	Unit work as normal, no hazards.
C261 (CTRL board)	Short circuit	DC800	10min	/	/	Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C329 (CTRL board)	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C296 (CTRL board)	Short circuit	DC800	10min	/	/	LCD display warning condition. Unit work as normal, no hazards.
C313 (CTRL board)	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
C322 (CTRL board)	Short circuit	DC800	10min	/	/	Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
U28 Pin2 to U24 Pin4 (CTRL board)	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit disconnected AC mains, no hazard. When fault remove Unit is recoverable after reset.
Relay (RY1)	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit does not connect to AC mains, no hazard. When fault remove Unit is recoverable after reset.
Relay (RY2)	Short circuit	DC800	10min	/	/	LCD display fault condition. Unit does not connect to AC mains, no hazard. When fault remove Unit is recoverable after reset.

EN 62109-1 : 2010									
Clause	Requirement – Test				Result - Remark			Verdict	
14.8	TABLE: Batteries							N/A	
The tests of 4.3.8 are applicable only when appropriate battery data is not available								N/A	
Is it possible to install the battery in a reverse polarity position?								N/A	
	Non-rechargeable batteries			Rechargeable batteries					
	Discharging		Un-intentional charging	Charging		Discharging		Reversed charging	
	Meas. current	Manuf. Specs.		Meas. current	Manuf. Specs.	Meas. current	Manuf. Specs.	Meas. current	Manuf. Specs.
Max. current during normal condition	--	--	--	--	--	--	--	--	--
Max. current during fault condition	--	--	--	--	--	--	--	--	--
Test results:									
- Chemical leaks								N/A	
- Explosion of the battery								N/A	
- Emission of flame or expulsion of molten metal								N/A	
- Electric strength tests of equipment after completion of tests								N/A	

EN 62109-2 : 2011			
Clause	Requirement – Test	Result - Remark	Verdict
4	General testing requirements		P
4.4	Testing in Three fault condition	See the IEC/EN 62109-1 report	P
4.4.4	Three fault conditions to be applied		P
4.4.4.15	Fault-tolerance of protection for grid-interactive inverters		P
4.4.4.15.2.1	General (EN 62109-2)		P
4.4.4.15.2.2	Design of insulation or separation (EN 62109-2)	2 separate relay control circuits (Control A and B) each controlling one line relay and one neutral relay.	P
4.4.4.15.2.3	Automatic checking of the disconnect means (EN 62109-2)	Another relay is still in the open position after one relay pole is short-circuit.	P
4.4.4.16	Stand-alone inverters – Load transfer test	Not a stand-alone inverters	N/A
4.4.4.17	Cooling system failure – Blanketing test	Blanketed the inverter by surgical cotton. After 7h, no fire,no hazards.	P
4.7	Electrical ratings tests	Not a stand-alone inverters	N/A
4.7.3	Measurement requirements for AC output ports for stand-alone inverters		N/A
4.7.4	Stand-alone Inverter AC output voltage and frequency		N/A
4.7.5	Stand-alone inverter output voltage waveform		N/A
4.8	Additional tests for grid-interactive inverters		P
4.8.1	General requirements regarding inverter isolation and array grounding	Isolated inverter	P
4.8.2	Array insulation resistance detection for inverters for ungrounded and functionally grounded arrays	30K ohms resistance used, EUT indicate a fault, and disconnect from the PV and grid .	P
4.8.3	Array residual current detection	See append table 4.8.3	P
4.8.3.1	General		P

EN 62109-2 : 2011			
Clause	Requirement – Test	Result - Remark	Verdict
4.8.3.2	30mA touch current type test for isolated inverters	See append table 4.8.3.2 External isolated transformer used for test.	P
4.8.3.3	Fire hazard residual current type test for isolated inverters	See append table 4.8.3. External isolated transformer used for test.	P
4.8.3.4	Protection by application of RCD's	No RCD used	N/A
4.8.3.5	Protection by residual current monitoring	See append table 4.8.3.5	N/A
5	Marking and documentation		P
6	Environmental requirements and conditions		P
7	Protection against electric shock and energy hazards		P
7.3	Protection against electric shock		P
7.3.10	Additional requirements for stand-alone inverters		N/A
7.3.11	Functionally grounded arrays		N/A
8	Protection against mechanical hazards		P
9	Protection against fire hazards		P
9.3	Short-circuit and overcurrent protection		P
9.3.4	Inverter backfeed current onto the array		P
10	Protection against sonic pressure hazards		P
11	Protection against liquid hazards		P
12	Protection against chemical hazards		N/A
13	Physical requirements		P
13.9	Fault indication	Fault indicated in LCD panel,detailed instruction in manual	P
14	Components		P

EN 62109-2 : 2011				
Clause	Requirement – Test		Result - Remark	Verdict
Table 4.8.3.2, 4.8.3.3	Touch current and fire hazard residual current measurement			
Condition	PV power supply “ + “ → terminal A [mA]	PV power supply “ - “ → terminal A [mA]	Limit [mA]	Comments
30mA Touch current	--	--	30mA	--
Condition	PV power supply “ + “ → terminal A [mA]	PV power supply “ - “ → terminal A [mA]	Limit [mA]	Comments
fire hazard residual current	--	--	300mA	Inverter ≤ 30KVA
fire hazard residual current	--	--	10mA per KVA	Inverter > 30KVA
Note:				

Table 4.8.3.5: Array residual current detection								Verdict
fault current that occurs suddenly								P
PV polarity	Trip current(mA)	Cut-off time(ms)				limits(s)	--	
PV+	30	232. 5	237. 5	241. 5	220. 0	228. 0	0.3	P
	60	118. 0	139. 5	132. 0	126. 0	137. 0	0.15	P
	150	35.0	39.0	39.5	24.5	27.5	0.04	P
PV-	30	235. 0	237. 5	235. 5	226. 5	228. 0	0.3	P
	60	137. 0	139. 0	139. 5	116. 5	120. 0	0.15	P
	150	39.0	39.5	38.0	38.5	39.0	0.04	P
constantly rising fault current								
PV polarity	Current (mA)					limits(mA)	P	
PV+	288.55	289.7	289.1	286	287.1	300	P	
PV-	294.7	296.1	296.3	296.2	295.1	300	P
