## TEST REPORT CEI 0-21

### **Reference technical rules for the connection of active and passive users to the LV networks of electrical distribution companies**

**Report**

Report Number ..... : 6072825.50

Date of issue ..... : 2020-07-23

Total number of pages ..... : 151 pages

**Testing Laboratory** ..... : DEKRA Testing and Certification (Suzhou) Co., Ltd.

Address ..... : No. 99, Hongye Road, Suzhou Industrial Park Suzhou, 215006, P.R. China

**Applicant's name** ..... : EAST Group Co., Ltd.

Address ..... : No.6 Northern Industry Road, Songshan Lake Sci. & Tech. Industrial Park, Dongguan City, Guangdong Province, China.

**Test specification:**

Standard ..... : CEI 0-21:2019-04

Test procedure ..... : Type test

Non-standard test method ..... : N/A

**Test Report Form No.** ..... : CEI 0-21\_V2.0

Test Report Form(s) Originator ..... : DEKRA Testing and Certification (Suzhou) Co., Ltd.

Master TRF ..... : Dated 2019-05

**Test item description** ..... : Grid-connected PV Inverter

Trade Mark ..... :

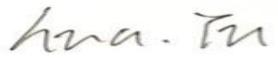

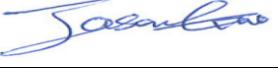

Manufacturer ..... : EAST Group Co., Ltd.

No.6 Northern Industry Road, Songshan Lake Sci. & Tech. Industrial Park, Dongguan City, Guangdong Province, China

Model/Type reference ..... : EA20KTSI, EA25KTSI, EA30KTSI

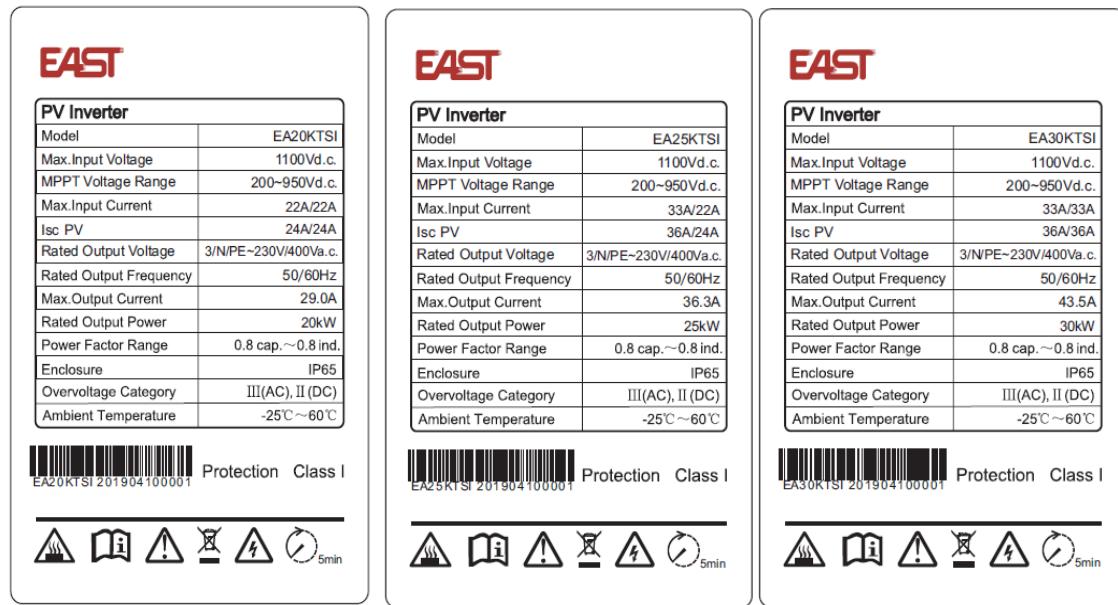

Ratings .....	: EA20KTSI: PV input: Max. 1100 Vdc , MPPT voltage range: 200-950 Vdc , max 22 A/22 A, Isc PV: 24 A/24 A Output: 230/400 Vac, 3/N/PE, 50 Hz, 20000 VA, max 29.0 A
	: EA25KTSI: PV input: Max. 1100 Vdc , MPPT voltage range: 200-950 Vdc , max 33 A/22 A, Isc PV: 36 A/24 A Output: 230/400 Vac, 3/N/PE, 50 Hz, 25000 VA, max 36.3 A
	: EA30KTSI: PV input: Max. 1100 Vdc , MPPT voltage range: 200-950 Vdc , max 33 A/33 A, Isc PV: 36 A/36 A Output: 230/400 Vac, 3/N/PE, 50 Hz, 30000 VA, max 43.5 A

### Copy of marking plate

**The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks.**

Rating label:

Remark:

According to customer's requirement, these models were evaluated under the grid frequency of 50 Hz.

<b>Test item particulars:</b>			
Equipment mobility .....	movable <u>fixed</u>	hand-held transportable	stationary for building-in
Connection to the mains .....	pluggable equipment <u>permanent connection</u>	direct plug-in	for building-in
Environmental category .....	outdoor	indoor unconditional	<u>indoor</u> <u>conditional</u>
Over voltage category Mains .....	OVC I	OVC II	<u>OVC III</u>
Over voltage category PV.....	OVC I	<u>OVC II</u>	OVC III
Mains supply tolerance (%) .....	-90 / +115 %		
Tested for power systems .....	TN		
IT testing, phase-phase voltage (V).....	N/A		
Class of equipment .....	<u>Class I</u>	Class II	Class III
	Not classified		
Mass of equipment (kg).....	43		
Pollution degree.....	Outside PD3; Inside PD2		
IP protection class.....	IP65		
<b>Possible test case verdicts:</b>			
- test case does not apply to the test object.....	N/A		
- test object does meet the requirement .....	P (Pass)		
- test object does not meet the requirement .....	F (Fail)		
- this clause is information reference for installation.: Info.			
<b>Testing:</b>			
Date of receipt of test item .....	2020-03-12(samples provided by applicant)		
Date (s) of performance of tests.....	2020-03-16 to 2020-07-15		
<b>General remarks:</b>			
The test results presented in this report relate only to the object tested.			
This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.			
The measurement result is considered in conformance with the requirement if it is within the prescribed limit, It is not necessary to account the uncertainty associated with the measurement result.			
This report is only for reference and is not used for legal proof function in China market.			
The information provided by the customer in this report may affect the validity of the results, the test lab is not responsible for it.			
"(see Enclosure #)" refers to additional information appended to the report.			
"(see appended table)" refers to a table appended to the report.			
Throughout this report a <input type="checkbox"/> comma / <input checked="" type="checkbox"/> point is used as the decimal separator.			
<b>Name and address of factory (ies):</b>			
EAST Group Co., Ltd			
No.6 Northern Industry Road, Songshan Lake Sci. & Tech. Industrial Park, Dongguan City, Guangdong Province, China			

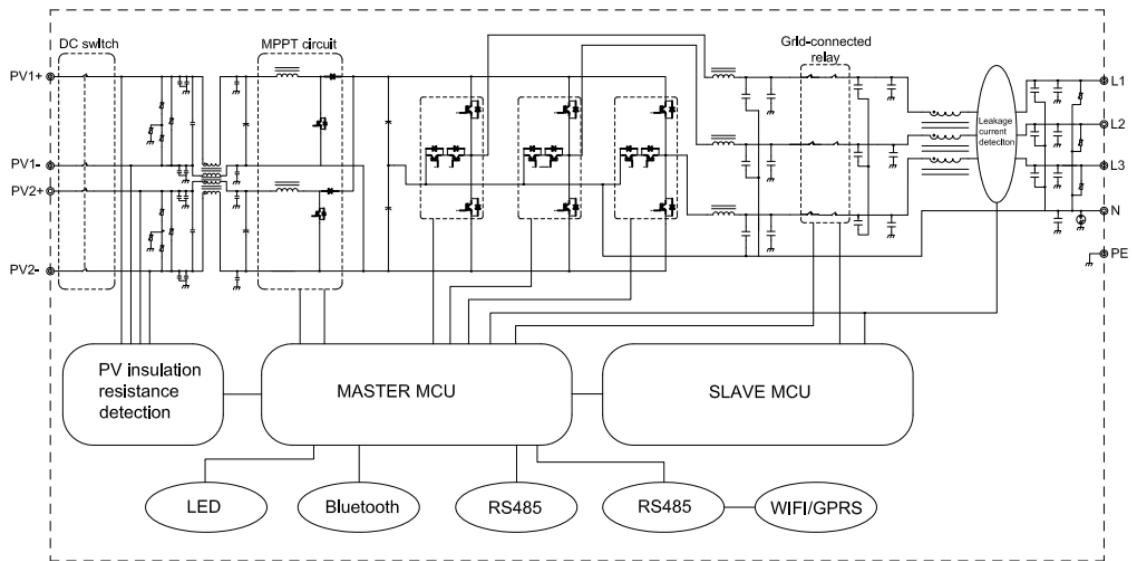

### General product information:

The products are grid-connected photovoltaic inverter converts DC voltage into AC voltage, the unit is providing EMC filtering at the input and output towards mains.

The output was switched off redundant by the high power switching bridge and relay in series. This designation assures that the disconnection of the output circuit from the grid will also operate in case of one error.

The internal control is redundant built. It consists of two Microcontrollers (master DSP U1, slave DSP U22). The master DSP can control the relays; detect the PV voltage, PV current and BUS voltage, measures grid voltage, frequency, AC current with injected DC, insulation resistance to ground and residual current. The slave CPU (U22) were also detected grid voltage, injected DC current and residual current. Both microcontrollers communicate with each other. Any abnormal of those electrical parameter will trigger the disconnection of the inverter from the grid.

### Block Diagram

### Model difference:

1. The models EA20KTSI/ EA25KTSI are similar with EA30KTSI in hardware and just power derating according to setting variations parameter in software.
2. The models EA20KTSI, EA25KTSI are identical with EA30KTSI in topological schematic circuit diagram of hardware except for the boost inductor (EA25KTSI and EA30KTSI with 889  $\mu\text{H}$ \*2 pcs, EA20KTSI with 650  $\mu\text{H}$ \*2 pcs); bus capacitor quantity (EA25KTSI and EA30KTSI with 8 bus capacitors, EA20KTSI with 6 bus capacitors); Boost diode and IGBT; current sampling resistor (EA25KTSI and EA30KTSI with 13 k $\Omega$ , EA20KTSI with 8.2 k $\Omega$ ); AC relay type of output side (EA25KTSI and EA30KTSI with type HF176F/12-H3F; EA20KTSI with type HF165FD-G/12-HY1STF); Internal fan (Only model EA30KTSI designed with internal fan); the type designation and the input/output electrical rating.

### The product was tested on:

Hardware version: 00

Software version: HornetV019

Unless otherwise specified, all the tests were performed on model EA30KTSI and also applicable for all other models stated in this report. According to the user manual and testing, the product was evaluated for maximum ambient temperature of 60°C and will derating the output power above 45°C.

<b>Test:</b>					
Test condition b) and c): voltage within the limits of 85% to 110%					

<b>CEI 0-21</b>			
Clause	Requirement - Test	Result - Remark	Verdict
Test condition e) and f): frequency within the limits of 49.90Hz to 50.10Hz			
The tests were performed on model EA30KTSI and are also applicable for all other models stated in this report.			
<b>Assessment criterion:</b>			
In order to prevent network disruptions, operation in parallel of generators of any kind must take place ONLY when the frequency and voltage detected at the output terminals remain within the following limits for 300 s (or not less than 30 s, in accordance with the specifications in 8.4.1.3, letter a):			
<ul style="list-style-type: none"><li>• voltage between 85% and 110% of <math>U_n</math>; frequency between 49.90 Hz and 50.10 Hz (default setting, adjustment range between 49 Hz and 51 Hz).</li></ul>			
In addition, the power supply for indirectly connected production systems should be gradual, with a transition from the initial "no-load" conditions at the time of parallel, to the power value available with a maximum positive ramp of 20% of the maximum load per minute.

<b>CEI 0-21</b>			
Clause	Requirement - Test	Result - Remark	Verdict
<b>B.1.2.1</b>	<b>Checking construction standards: Reactive power capability</b>		<b>P</b>
	As established in 8.4.4.2, static converters set up for continuous operation in parallel with the distributor network must be able to operate with a power factor different from 1.		<b>P</b>
<b>B.1.2.2</b>	<b>Test performance and recording mode</b>		<b>P</b>
	The converter must be set so that it can, respectively, absorb (induction) and supply (resistance) the maximum reactive power available at each level of active power supplied according to its capability.		<b>P</b>
	At this point the DC source must be regulated so that the converter can supply active power in sequence included in the 10 intervals [0-10]%; [10-20]%;...; [90-100]% of nominal power (1-min average values calculated on the basis of the values measured at the fundamental frequency in a 200-ms window).		<b>P</b>
	For each of the 10 levels of active power at least 3 values for inductive reactive power and 3 for capacitive power shall be reported as 1-min average values calculated based on measurements at the fundamental frequency of a 200-ms window.		<b>P</b>
	In addition to measurements of reactive power limit values, the measured values should be recorded by setting the reactive power supplied to 0 ( $\cos \phi = 1$ ).		<b>P</b>

<b>Test:</b>						
DC source should be set to 50%(test1) and 100%(test2) output power						
Starting with Q=0 then Q <sub>min</sub> ≤ -0,4843 P <sub>n</sub> to Q <sub>max</sub> ≥ 0,4843 P <sub>n</sub> , and then back to Q=0 in doing so each point must be kept for at least 2 minute.						
The total tolerance is ΔQ ≤ ±5,0% of P <sub>n</sub> or Δcosφ ≤ ±0.01						
The maximum response time is 10s.						
As for the requirements of the previous paragraph, also in this case the tests are required to inverters used in plants with a total power greater than 11.08 kW, which must also be able to implement a centralized control strategy via remote control signal, issued by the Distributor. However, the manufacturer has the right to voluntarily carry out tests even for smaller inverters.						
The tests were performed on model EA30KTSI and are also applicable for all other models stated in this report.

<b>B.1.2.5</b>	<b>Automatic supply of reactive power according to a characteristic curve <math>\cos\varphi = f(P)</math></b>	<b>P</b>
----------------	---	----------

All static converters must be able to absorb reactive power automatically and independently (local control logic) in accordance with a characteristic curve of the power/active power factor =  $f(P)$ .

The purpose of the test is to check that the converter follows the methods for automatic supply of reactive power according to the standard characteristic curve  $\cos\varphi = f(P)$  outlined in E.2, according to method a).

The standard curve is uniquely defined by linear interpolation of the three characteristic points:

A:  $P = 0,2 P_n; \cos\varphi = 1$

B:  $P = 0,5 P_n; \cos\varphi = 1$

C:  $P = P_n; \cos\varphi = \cos\varphi_{max}$

where  $\cos\varphi_{max}$  is equal to 0.90 for all converters.

Adjustment along the characteristic curve is enabled when the voltage detected at the output terminals exceeds the "critical" lock-in value (e.g. set to  $V_n = 1.05 V_n$ , see paragraph E.2).

The lock-in voltage value that enables the automatic supply of reactive power and that during testing must be set to  $1.05 V_n$  (default setting also for production), must be adjustable in the range between  $V_n$  and  $1.1 V_n$  at intervals of  $0.01 V_n$ .

The Distributor shall specify the required lock-in voltage value in the Operating Regulations.

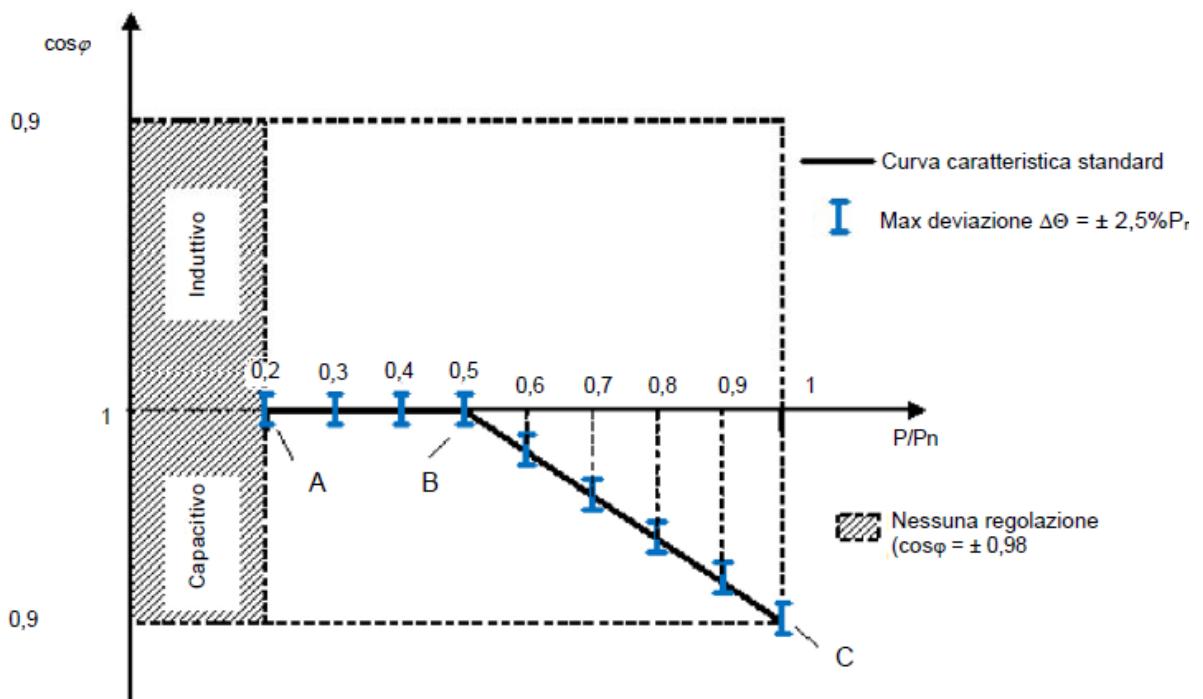

Figure 27 - Standard characteristic curve  $\cos\varphi = f(P)$

<p>The graph illustrates the performance of the EA30KTSI model across a range of power levels. The x-axis represents the ratio of active power to nominal power (P/Pn(%)) from 20% to 100%. The left y-axis shows Power(W) from -5000 to 30000. The right y-axis shows Cos φ from 0.82 to 1.02. Four data series are plotted: Active power [W] (blue line with circles), Reactive power [Var] (yellow line with circles), Limit:Cos φ (+) (red line with circles), and Limit:Cos φ (-) (grey line with circles). The Active power and Reactive power curves show a non-linear relationship, increasing with power. The Cos φ measured and Cos φ expected curves are constant at higher power levels but drop sharply as the power ratio approaches 100%, indicating a transition or limit point.</p> <table border="1"> <caption>Data points estimated from the graph</caption> <thead> <tr> <th>P/Pn (%)</th> <th>Active power [W] (Measured)</th> <th>Reactive power [Var] (Measured)</th> <th>Cos φ measured</th> <th>Cos φ expected</th> </tr> </thead> <tbody> <tr><td>20%</td><td>~6000</td><td>~0</td><td>~0.995</td><td>~1.000</td></tr> <tr><td>30%</td><td>~9000</td><td>~0</td><td>~0.997</td><td>~1.000</td></tr> <tr><td>40%</td><td>~12000</td><td>~0</td><td>~0.998</td><td>~1.000</td></tr> <tr><td>50%</td><td>~15000</td><td>~0</td><td>~0.999</td><td>~1.000</td></tr> <tr><td>60%</td><td>~18000</td><td>~0</td><td>~0.999</td><td>~1.000</td></tr> <tr><td>70%</td><td>~20000</td><td>~5000</td><td>~0.983</td><td>~0.964</td></tr> <tr><td>80%</td><td>~23000</td><td>~8000</td><td>~0.964</td><td>~0.943</td></tr> <tr><td>90%</td><td>~26000</td><td>~11000</td><td>~0.943</td><td>~0.923</td></tr> <tr><td>100%</td><td>~26000</td><td>~13000</td><td>~0.923</td><td>~0.900</td></tr> <tr><td>100%</td><td>~26000</td><td>~13000</td><td>~0.900</td><td>~0.900</td></tr> </tbody> </table>							P/Pn (%)	Active power [W] (Measured)	Reactive power [Var] (Measured)	Cos φ measured	Cos φ expected	20%	~6000	~0	~0.995	~1.000	30%	~9000	~0	~0.997	~1.000	40%	~12000	~0	~0.998	~1.000	50%	~15000	~0	~0.999	~1.000	60%	~18000	~0	~0.999	~1.000	70%	~20000	~5000	~0.983	~0.964	80%	~23000	~8000	~0.964	~0.943	90%	~26000	~11000	~0.943	~0.923	100%	~26000	~13000	~0.923	~0.900	100%	~26000	~13000	~0.900	~0.900

<b>Note:</b>						
The lock-in value is adjustable between Vn and 1.1Vn and the lock-out value between Vn and 0.9Vn in 0.01V steps.						
The inverter voltage on the AC side of the (inverter) is rated to 400V line to line.						
In reference to the circular characteristic, the inverter reduces the active output power to maintain the reactive output power.						
The under voltage measurement effects the active output power in reference to the reactive output power since the reactive output power has always priority. Therefore the inverter must lower the active output power.						
The tests were performed on model EA30KTSI and are also applicable for all other models stated in this report.

Clause	Requirement - Test	Result - Remark	Verdict
--------	--------------------	-----------------	---------

<b>B.1.3.2</b>	<b>Adjusting active power in the presence of transients on the transmission network</b>	<b>P</b>
----------------	---	----------

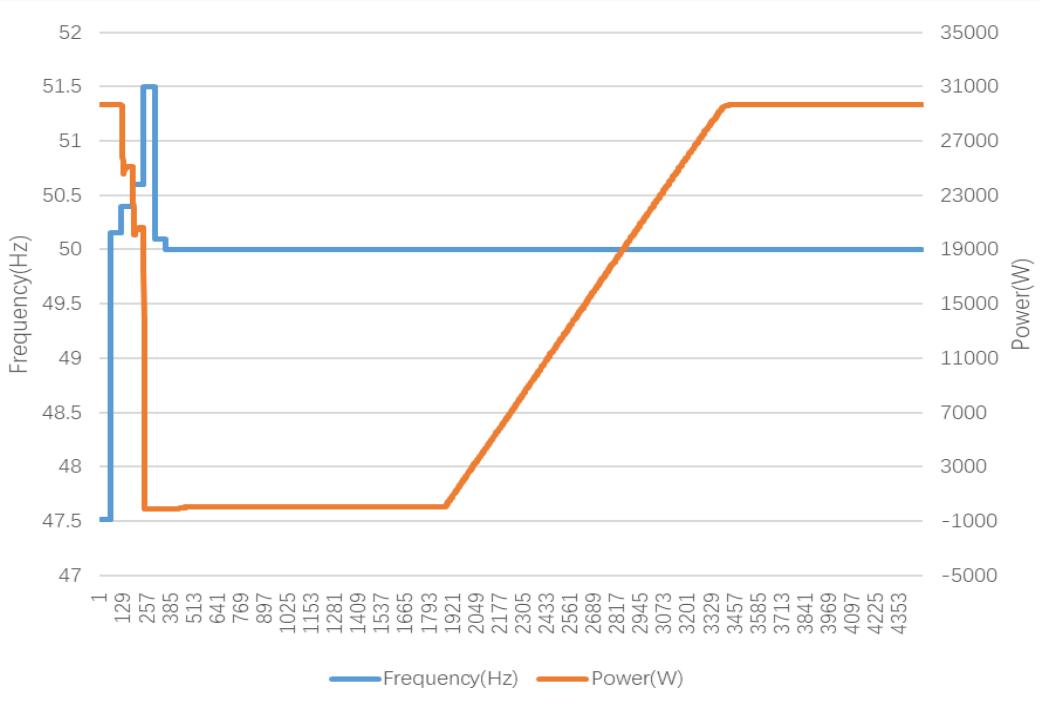

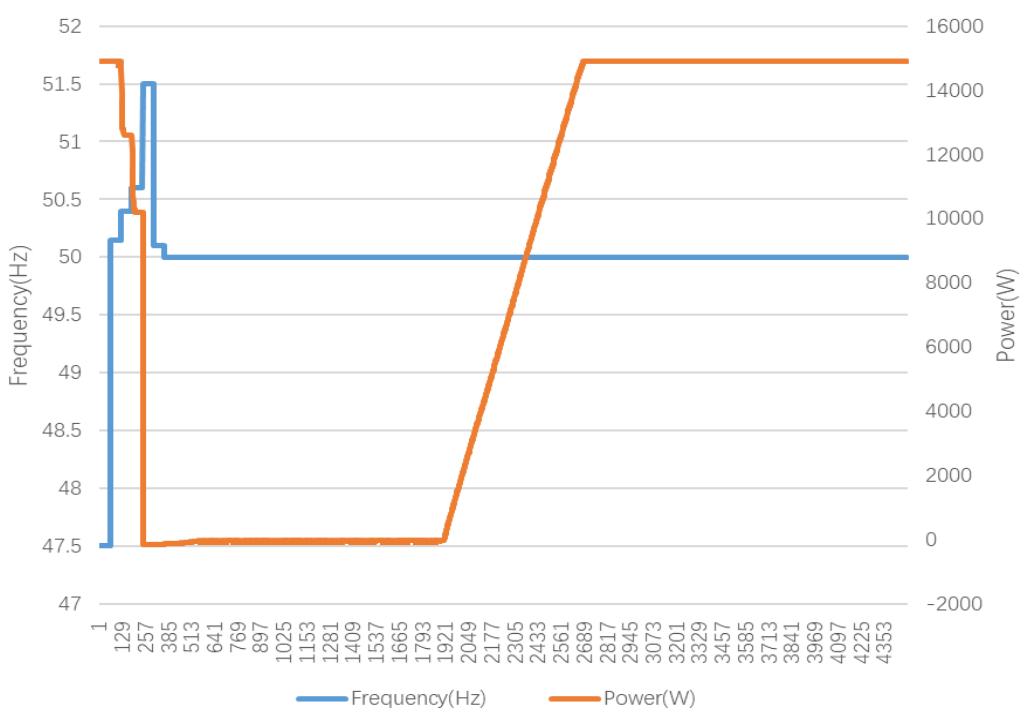

- Connect the test object following the manufacturer's instructions.
- Set all parameters of the simulated network to the respective normal operation values.
- Set all the parameters of the test object to the respective normal operation values, so that the output AC power of the inverter is equal to the maximum AC output for sequence A, and 50% in the case of sequence B.
- Take measurements at 7 points (the frequency value should have a maximum uncertainty of  $\pm 10$  mHz) consecutively over time:
  - 1)  $f = 47.51$  Hz ( $t_1$  for sequence A,  $t'_1$  for sequence B)
  - 2)  $f = 50$  Hz + 0.15 Hz ( $t_2$  for sequence A,  $t'_2$  for sequence B)
  - 3)  $f = 50$  Hz + 0.40 Hz ( $t_3$  for sequence A,  $t'_3$  for sequence B)
  - 4)  $f = 50$  Hz + 0.60 Hz ( $t_4$  for sequence A,  $t'_4$  for sequence B)
  - 5)  $f = 50$  Hz + 1.49 Hz ( $t_5$  for sequence A,  $t'_5$  for sequence B)
  - 6)  $f = 50$  Hz + 0.11 Hz ( $t_6$  for sequence A,  $t'_6$  for sequence B)
- At this point, perform step 7 bringing the frequency back to the nominal value in order to check the conditions for a gradual recovery of the maximum supply (sequence A), or 50% of the maximum power (sequence B):
- 7)  $f = 50$  Hz ( $t_7$  for sequence A,  $t'_7$  for sequence B)

**Graph of power from 100%Pn to 0%Pn**

The graph illustrates the power limitation process. The blue line represents the actual power output, which starts at 29400W and decreases in discrete steps. The red lines represent the upper and lower limit levels. The power drops from 29400W to 27800W at 61s, 26200W at 121s, 24600W at 181s, 23000W at 241s, 21400W at 301s, 18200W at 361s, 15000W at 421s, 11800W at 481s, 8600W at 541s, 5400W at 601s, and finally reaches 1.585W at 661s. The limits are indicated by red horizontal bars at various power levels.

4s – three-phase symmetrical fault ( $P > 0.9$ )	$0.75 \pm 0.05 (V_4/V_n)$	$1300 \pm 20$	1304.765	328.000
4a – two-phase asymmetrical fault ( $P = 0.1 - 0.3$ )	$0.75 \pm 0.05 (V_4/V_n)$	$1300 \pm 20$	1300.882	271.640
4a – two-phase asymmetrical fault ( $P > 0.9$ )	$0.75 \pm 0.05 (V_4/V_n)$	$1300 \pm 20$	1303.736	244.295
5 – LV two-phase asymmetrical fault ( $P = 0.1 - 0.3$ )	$0.10 \pm 0.05 (V_5/V_n)$	200 +20	200.736	280.606
5 – LV two-phase asymmetrical fault ( $P > 0.9$ )	$0.10 \pm 0.05 (V_5/V_n)$	200 +20	200.434	62.531
6 – LV two-phase asymmetrical fault ( $P = 0.1 - 0.3$ )	$0.50 \pm 0.05 (V_6/V_n)$	400 +20	400.917	272.476
6 – LV two-phase asymmetrical fault ( $P > 0.9$ )	$0.50 \pm 0.05 (V_6/V_n)$	400 +20	400.179	67.074

**Note:**

(\*) Regardless of the method used to simulate transients (simulator or impedance network), the rise and fall time of the voltage must be less than 10 ms

The interface protection shall be disabled or adjusted to avoid spurious tripping during testing.

The test conditions are performed as worst case conditions. The inverter feeds maximal active and reactive power during the complete test.

The tests were performed on model EA30KTSI and are also applicable for all other models stated in this report.

The purpose of these tests is to ensure that the converter, when used in systems with total capacity

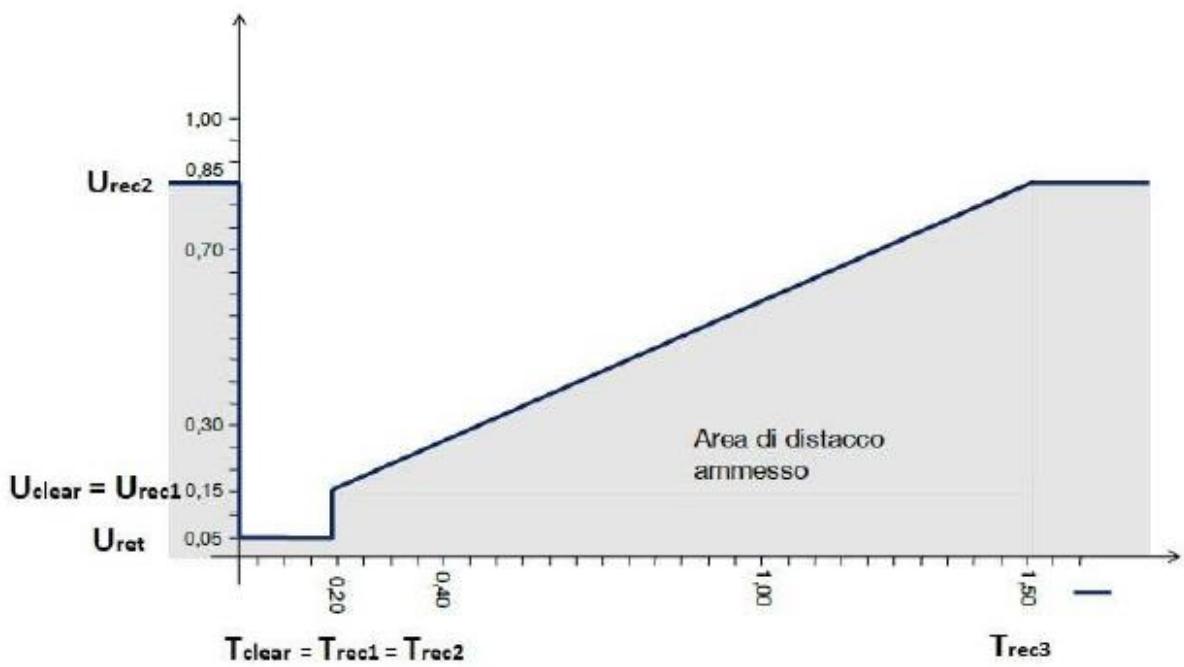

**CEI 0-21**

Clause	Requirement - Test	Result - Remark	Verdict
--------	--------------------	-----------------	---------

greater than 11.08 kW, is insensitive to voltage dips according to the time-amplitude profile shown in the diagram.

In particular, the tests must verify that the following functional requirements are met:

- in the cross-hatched area the generator must not disconnect from the network. Supply of active and reactive power prior to the occurrence of the fault can be temporarily interrupted in this area.
- in the area below (grey) the generator can disconnect from the network.
- within 400 ms from restoring network voltage to within the range of +10% and -15% of nominal voltage, the generator must return to supplying active and reactive power to the network as before the fault, with a maximum tolerance of  $\pm 10\%$  of the nominal voltage of the generator. If voltage returns but remains in the range between 85% and 90%, power distribution may be reduced in relation to the generator limits of output power.

<b>B.1.6</b>	<b>Checking the insensitivity to automatic reclosing during phase accordance</b>	<b>P</b>
Clause	Test	Result
B.1.6.1	Test on the simulation network	P

<b>B.1.6</b>	<b>Checking the insensitivity to automatic reclosing during phase accordance</b>	<b>P</b>
<b>General:</b>		
This type of test can be performed in two ways:		
<ol style="list-style-type: none"> <li>1. with the inverter connected to a simulated network (B.1.6.1)</li> <li>2. with the inverter connected to the distribution network (B.1.6.2 and alternatively B.1.6.3).</li> </ol>		
The generator must not be damaged as a result of the tests. Protective devices may be switched off or released.		
With reference to the diagram in Figure 35 – Using the simulated network:		
<ul style="list-style-type: none"> <li>• The network simulator should be able to produce phase shifts in of the output voltage at the inverter terminals of 90° and 180°, respectively.</li> <li>• Generator: inverter operating at nominal power with unity power factor (<math>\cos\phi= 1</math>)</li> <li>• VR: simulated network voltage</li> <li>• The generator must start operating at nominal power. Let the system operate under the conditions set for at least 5 minutes or the time needed to stabilise the internal temperature of the converter.</li> </ul>		
After the stabilisation period two tests should be performed in sequence, by inducing the transient that produces a phase shift angle on the simulated network voltage VR of 180° and 90°.		
In the test report the following data for each of the two test sequences shall be indicated:		
<ul style="list-style-type: none"> <li>• the angle between the voltage before and after the phase shift, with an instrument with a 1° error;</li> <li>• the generator current on a time window starting from 20 ms before until at least 200 ms after the phase shift of the simulated network voltage.</li> </ul>

### Datasheet of the relay

#### HF176F

#### SOLAR RELAY

File No.: E133481

File No.: R50411032

#### Features

- 65A switching capable.
- Applicable to solar photovoltaic inverter
- 3mm contact gap
- Low coil holding voltage contributes to saving energy of equipment.
- UL insulation system: class F.

#### CONTACT DATA

Contact arrangement	1A
Contact resistance(Initial)	$\leq 10\text{m}\Omega$ max( 6VDC 2A)
Contact material	AgSnO <sub>2</sub> , AgNi
Contact rating (Res. load)	Making 20A, Carrying 65A, Breaking 20A, 277VAC 85°C
Max. switching voltage	400VAC
Max. switching current	65A
Max. switching power	18005VA
Mechanical endurance	$1 \times 10^6$ OPS (Making 20A,
Electrical endurance	Carrying 65A, Breaking 20A, Resistive load, at 85°C, 1s on 9s off)

#### COIL

Coil power	Approx.1.92W
Holding voltage	40% to 100%U <sub>N</sub> (at 25°C) 50% to 60%U <sub>N</sub> (at 85°C)

**Notes:** 1)The coil holding voltage is the voltage applied to coil 100ms after the rated voltage.  
2)To avoid overheating and burning, the coil can not be consistently applied to with voltage larger than maximum holding voltage.

#### COIL DATA

at 23°C

Nominal Voltage VDC <sup>1)</sup>	Pick-up Voltage VDC, max. <sup>1)</sup>	Drop-out Voltage VDC min. <sup>1)</sup>	Max. Voltage VDC <sup>2)</sup>	Coil Resistance Ω
6	$\leq 4.2$	$\geq 0.6$	6.6	18.8 x (1±10%)
9	$\leq 6.3$	$\geq 0.9$	9.9	42.2 x (1±10%)
12	$\leq 8.4$	$\geq 1.2$	13.2	75 x (1±10%)
24	$\leq 16.8$	$\geq 2.4$	26.4	300 x (1±10%)

**Notes:** 1)The data shown above are initial values.

2)\*Maximum voltage refers to the maximum voltage which relay coil could endure in a short period of time.

	AgSnO <sub>2</sub>	Making 20A,Carrying 65A,Breaking 20A,400VAC Resistive at 85°C 65A 277VAC 85°C,cos φ =0.8 65A 30VDC 85°C,L/R=0 65A 60VDC 85°C,L/R=0

**Notes:** 1) All values unspecified are at room temperature.

2) Only typical loads are listed above. Other load specifications can be available upon request.

HONGFA RELAY

ISO9001、ISO/TS16949、ISO14001、OHSAS18001、IECQ QC 080000 CERTIFIED

2019 Rev. 1.00

**ORDERING INFORMATION**

	HF176F/	12	-H	3	F	(XXX)
Type						
Coil voltage	6, 9, 12, 24VDC					
Contact arrangement	H:1 Form A					
Contact material	3: AgNi T: AgSnO <sub>2</sub>					
Insulation standard	F: Class F					
Special code	XXX: Customer special requirement				Nil: Standard	

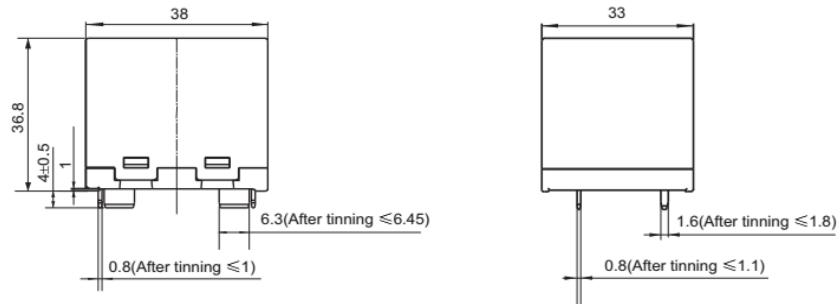

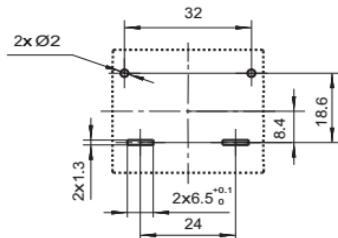

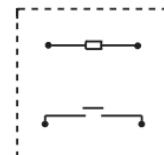

Notes: 1) Water cleaning or surface process is not suggested after the flux-proofed relays are assembled on PCB.

2) Flux-proofed relays can not be used in the environment with pollutants like H<sub>2</sub>S, SO<sub>2</sub>, NO<sub>2</sub>, dust, etc.

3) The customer special requirement express as special code after evaluating by Hongfa.

**OUTLINE DIMENSIONS, WIRING DIAGRAM AND PC BOARD LAYOUT**

Unit: mm

**Outline Dimensions****PCB Layout (Bottom view)****Wiring Diagram (Bottom view)**

Notes: 1) In case of no tolerance shown in outline dimension: outline dimension  $\leq 1\text{mm}$ , tolerance should be  $\pm 0.2\text{mm}$ ; outline dimension  $> 1\text{mm}$  and  $\leq 5\text{mm}$ , tolerance should be  $\pm 0.3\text{mm}$ ; outline dimension  $> 5\text{mm}$ , tolerance should be  $\pm 0.4\text{mm}$ .

2) The tolerance without indicating for PCB layout is always  $\pm 0.1\text{mm}$ .

**Disclaimer**

The specification is for reference only. See to "Terminology and Guidelines" for more information. Specifications subject to change without notice. We could not evaluate all the performance and all the parameters for every possible application. Thus the user should be in a right position to choose the suitable product for their own application. If there is any query, please contact Hongfa for the technical service. However, it is the user's responsibility to determine which product should be used only.
